

Photography tips

Get close, move around

Ensure everything in the frame has meaning. Move around so unwanted elements are blocked by the subject or out of the frame.

Get down to child level

Look through a child's eyes and notice overlooked details by shooting at their eye level or below.

Involve children

Support children in taking their own photos to capture their view of the world.

Record processes

Show a process like creating an artwork by taking a series of photos or by using your device's timelapse feature.

Don't forget video

Video is a rich, accurate and fast way to share what occurred and encourages family engagement.

Remember...

Keep devices in a **dedicated place**, **batteries charged** and **lenses clean**.

Keep videos **under 3-mins** or 300MB so they upload fast. Reduce video quality in device settings.

Keep light behind or beside you so subjects aren't silhouetted. More light = clear photos, no blur.

Always take photos in landscape mode? **Turn your device** to portrait. And vice versa.

Take a few shots to make sure you captured the moment and delete what you don't use later.
